

# Less Frequent, More Deadly Supplemental Document

The analysis, entitled [Less Frequent, More Deadly: Trends in the Lethality of Crime in 17 U.S. Cities](#), examined changes in lethality across 17 cities. This supplemental document provides the logistic regression results referenced in the main report. The regression included violent crime incidents (classified as homicide, aggravated assault, and robbery) for the years 2012 to 2024. The outcome variable was homicide; the analysis coded homicide incidents as one and other violent incidents as zero. The predictor variables were dummy variables for the years 2012 to 2024, with 2020 as the reference year. The analysis repeated this process for gun lethality.
